Education

Arizona State University (MS in Information Technology)

Tempe, Arizona

January 2024 - December 2025

Gujarat Technological University (B.E. in Information Technology)

Gujarat, India

August 2019 - July 2023

Experience

Community Dreams Foundation

Florida, USA

Software Developer - Remote

February 2026 – Present

- Developed and maintained React features across 3+ volunteer and project-management workflows, including task tracking, forms, and user-facing dashboards.
- Built and integrated 10+ REST API endpoints for project, task, and user operations, enabling reliable communication between the frontend and backend.
- Resolved 20+ application bugs and UI issues, improving workflows and reducing repeated manual fixes.
- Collaborated through Git/GitHub on 30+ code changes and pull requests, testing and reviewing updates before integration into the shared codebase.

Ninja Technolabs

Ahmedabad, India

Software Engineer, Full Stack

January 2023 – November 2023

- Re-architected and fully refactored a fragmented, legacy billing workflow into a modern **React + Node.js + MySQL** stack, which eliminated old coupling issues, reduced invoice propagation **errors by 15%**, and directly improved reliability for **3,000** monthly users.
- Designed REST endpoint contracts and relational DB schemas to support multi-entity billing flows, then led the data migration of **2,000+ invoices/month** into consistent relational structures without losing referential integrity.
- Developed a modular React component kit and standardized API utility layer, which proactively eliminated **28%** duplicated UI code across the codebase and accelerated implementers in other feature pods.
- Introduced transactional DB updates with **Jest and Supertest** unit coverage across core flows, driving automated validation at commit time and increasing test coverage on critical billing journeys to **70%**, which materially reduced manual QA cycles.

BrainyBeam Technologies Pvt. Ltd

Ahmedabad, India

Software Engineer Intern

August 2022 – November 2022

- Consolidated customer data from multiple inconsistent sources into one normalized MySQL schema, which **improved data accuracy** and made it easier for analysts to run reliable queries without manual cleanup.
- Re-engineered CI/CD pipelines in GitHub Actions with caching, parallelization and smarter dependency boundaries. Reducing PR-to-production time by **35%** across **35 engineers**, accelerating throughput and engineering velocity.
- **Automated error reporting and build pipeline** visibility via Slack notifications and GitHub status checks, which streamlined triage, shortened debugging loops, and materially increased deployment transparency.

Freelancing Work

Ahmedabad, India

Web Developer

January 2022 – July 2022

- Built and improved a **React/Node.js** web application for a startup, improving page load performance by about **25%** based on Lighthouse testing.
- Developed and connected **REST APIs** for frontend-backend communication and implemented basic **JWT authentication** for protected user access.

Projects

Distributed Key-Value Store — C++, TCP/IP, Multithreading, CMake

- Engineered a high-performance in-memory key-value database in C++ with TCP socket communication, concurrent client handling, thread pooling, TTL-based expiration, and LRU cache eviction.
- Implemented append-only persistence and crash recovery with thread-safe data structures; benchmarked throughput and p95/p99 latency under increasing concurrent workloads.

Real-Time collaborative Workspace — TypeScript, React, Node.js, WebSockets, Redis, PostgreSQL

- Built a real-time multi-user collaboration platform with WebSocket-based synchronization, presence tracking, autosave, version history, and role-based workspace permissions.
- Designed a horizontally scalable backend using Redis Pub/Sub and PostgreSQL to synchronize events across multiple Node.js instances, with reconnect handling and optimistic client updates.

Competitive Programming

- Solved **1,000+ algorithmic problems** across **LeetCode, CodeForces, CodeChef, and GeeksforGeeks**; strong proficiency in data structures, dynamic programming, graph algorithms, and optimization patterns.
- Achieved **1st place ranking** in college for competitive programming and algorithmic problem solving.
